Keeping Vital Healthcare Services Running with Remote Connectivity

Fraser Health Authority is one of Canada's largest and fastest growing health authorities, responsible for providing hospital- and community-based health services to over 1.8 million people. To enable secure, mobile access to electronic healthcare records and systems, Fraser Health decided to deploy a new IT platform. Fraser Health had only recently begun testing the new solution when the COVID-19 crisis hit. They needed to build out the environment so that it could support up to 10,000 remote users. Combining Lenovo servers, Intel® Xeon® Scalable processors and Nutanix Enterprise Cloud software, Fraser Health has the capacity to support remote workers helping it to deliver high-quality patient services in a period of unprecedented disruption.

> "We have always found Lenovo equipment to be very reliable and performant, and the ThinkAgile HX platform lives up to our expectations. Our second batch of HX3320 nodes feature 2nd Gen Intel® Xeon® Scalable processors and we've been impressed with the performance of the new chipset."
