

YOU CAN'T PREDICT THE FUTURE...

As workloads and usages evolve over time, the server mix you chose years ago may not be well-matched for your changing workload demands today.

...BUT YOU CAN BE READY FOR IT.

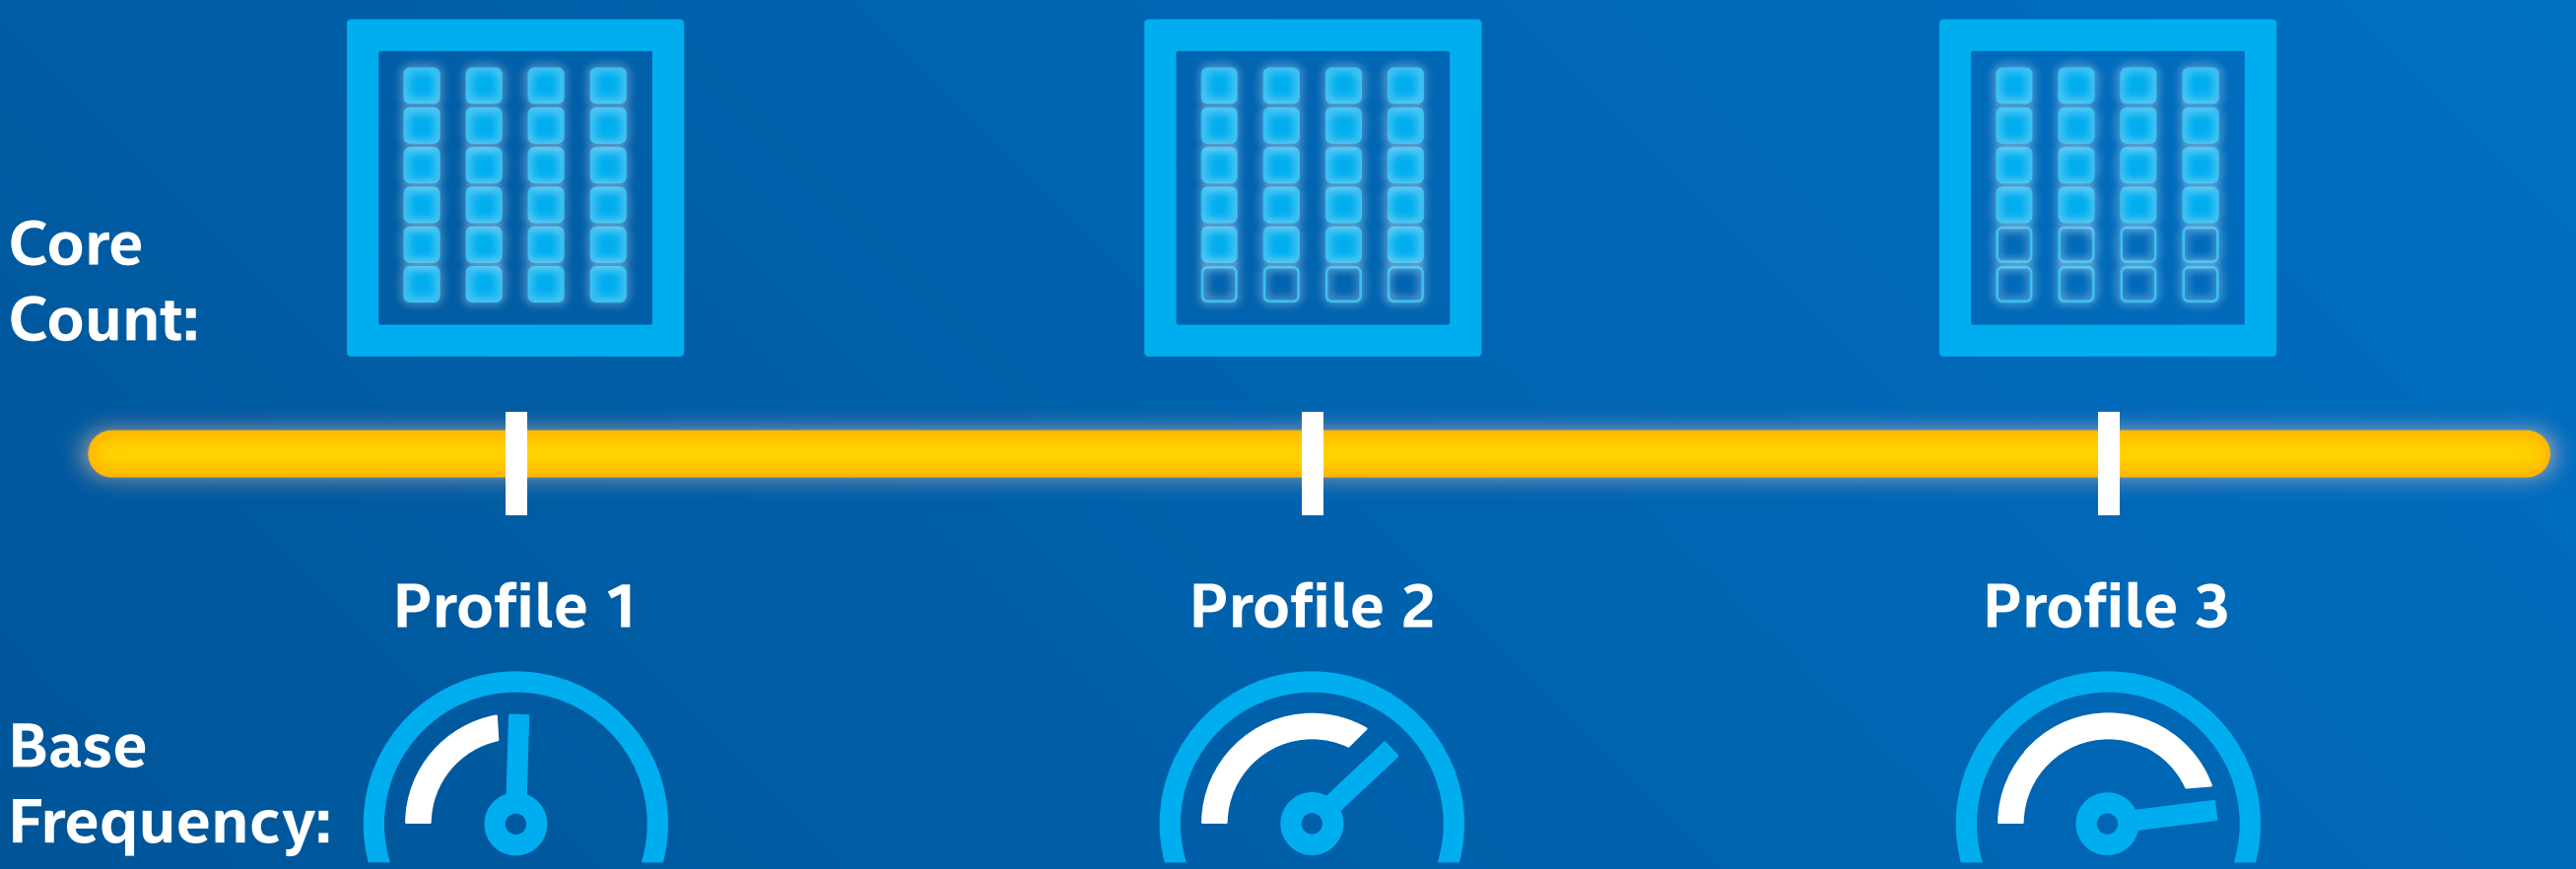

2ND GEN INTEL® XEON® SCALABLE PROCESSORS WITH INTEL® SPEED SELECT TECHNOLOGY

A collection of innovative capabilities for customized control of processor performance.

INTEL® SPEED SELECT TECHNOLOGY – PERFORMANCE PROFILE

Allows you to change between three distinct performance profiles.

FOR EXAMPLE

If your current workload mix favors higher per-core performance...

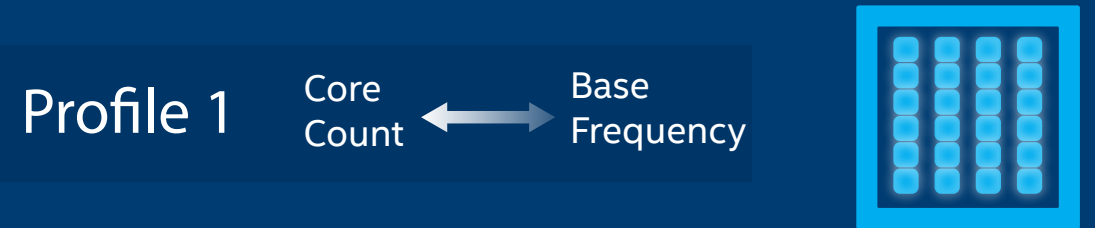

...you can set a profile with fewer active cores running at a higher base operating frequency.

And if your workload mix evolves to favor parallelism...

...you can easily change to a profile that reduces base operating frequency while enabling more cores.

THE RESULT

A single set of adaptable servers so you can respond quickly to changing workload requirements, while optimizing performance and utilization.
